RADIOLOGY REPORT FORM

RADIOLOGY REPORT

Name: JACKSON CHRISTOPHER WANGARE

Age: 25Y

Study Date: 2025-02-06

Gender: M

History:

BRAIN MRI

Indication: Altered gait, Involuntary tremors

TECHNIQUE

MRI Brain using 1.5 tesla MRI

FINDINGS

The supra and infratentorial ventricular system, basal cisterns and cortical sulci appear prominent.

No midline shift detected and no mass effect observed.

No space occupying mass lesions identified.

No significant signal alteration of the white matter.

Normal basal ganglia structures bilaterally with no altered signals.

Normal structures of the posterior fossa, with normal cervico-medullary junction

No intra or extra axial collections detected.

No gross vascular anomalies identified.

No altered signals of the brain stem structures in the provided T1WI, T2WI and FLAIR.

Conclusion:

Brain atrophy

No evidence of ICSOL

Report Date: 2025-02-06 19:56:25
